

# Quick – create a DVD!

## Bring up Premiere Pro

- Import files
- Select and drag to video/audio timeline
- Right click and scale to frame size
- Click Adobe Dynamic Link

## This brings up Adobe Encore

Test Project – it will indicate 2 missing items – set these up  
[Drag and circley icon to the left and magically it sets the title – appear this is not necessary – skip this]

## Build

H264 if it is not lighting/compression sensitive

Alternatively on a MAC use toast – drag, drop and burn – need to document the best settings

Watch for a DMC or HUGS topic – when to and when not to use H264, how to burn a good quality DVD
